Expressed in ureter..

Subcellular location:

 ${\bf Endoplasmic\ reticulum\ membrane, Single-pass\ type\ I\ membrane\ protein.}$

Function:

Component of the asymmetric unit membrane (AUM), a highly specialized biomembrane elaborated by terminally differentiated urothelial cells. May play an important role in AUM-cytoskeleton interaction in terminally differentiated urothelial cells. It also contributes to the formation of urothelial glycocalyx which may play an important role in preventing bacterial adherence (By similarity)..
