# Myelin Basic Protein Rabbit mAb [K0B2]

Cat NO. :A53463

## Information:

Applications	Reactivity:	UniProt ID:	MW(kDa)	Host	Isotype	Size
WB,IHC	H,M,R	P02686	14-21.5 kDa	Rabbit	lgG	100ul,200ul

#### **Applications detail:**

Application	Dilution			
WB	1:1000-2000			
ІНС	1:100			
The optimal dilutions should be	optimal dilutions should be determined by the end user			

#### Conjugate:

UnConjugate

Form:

Liquid

#### sensitivity:

Endogenous

## **Purification**:

Protein A purification

#### Specificity:

Antibody is produced by immunizing animals with a synthetic peptide at the sequence of human Myelin Basic Protein

#### Storage buffer and conditions:

Antibody store in 10 mM PBS, 0.5mg/ml BSA, 50% glycerol (buffer) .

Shipped at 4°C. Store at-20°C or -80°C.

Products are valid for one natural year of receipt. Avoid repeated freeze / thaw cycles.

#### **Tissue specificity:**

MBP isoforms are found in both the central and the peripheral nervous system, whereas Golli-MBP isoforms are

expressed in fetal thymus, spleen and spinal cord, as well as in cell lines derived from

#### Subcellular location:

Myelin membrane,Peripheral membrane protein,Cytoplasmic side.

Introduction: WB: Western Blot IP: Immunoprecipitation IHC: Immunohistochemistry ChIP: Chromatin Immunoprecipitation ICC/IF: Immunocytochemistry/ Immunofluorescence F: Flow Cvtometry

Cross Reactivity: H: human M: mouse R: rat Hm: hamster Mk: monkey Vir: virus MI: mink C: chicken Dm D. melanogaster X: Xenopus Z: zebrafish B: bovine Dg: dog Pg: pig Hr: horse

For Research Use Only. Not For Use In Diagnostic Procedures.

The classic group of MBP isoforms (isoform 4-isoform 14) are with PLP the most abundant protein components of the myelin membrane in the CNS. They have a role in both its formation and stabilization. The smaller isoforms might have an important role in remyelination of denuded axons in multiple sclerosis. The non-classic group of MBP isoforms (isoform 1-isoform 3/Golli-MBPs) may preferentially have a role in the early developing brain long before myelination, maybe as components of transcriptional complexes, and may also be involved in signaling pathways in T-cells and neural cells. Differential splicing events combined with optional post-translational modifications give a wide spectrum of isomers, with each of them potentially having a specialized function. Induces T-cell proliferation..

## Validation Data:

#### Myelin Basic Protein Rabbit mAb [K0B2] Images

Western blot (SDS PAGE) analysis of extracts from Mouse brain.Using Myelin Basic ProteinRabbit mAb [K0B2] at dilution of 1:1000 incubated at  $4^{\circ}$  over night.
